SUMMARY

Motivated BS Information Technology student (6th Semester) with knowledge of software development, programming, data structures, algorithms, and debugging techniques. Experience as a Teaching Assistant has strengthened communication, leadership, and technical support skills. Passionate about developing efficient software solutions and continuously improving technical expertise. Seeking an entry-level Software Developer role to contribute to innovative projects while building a successful career in software engineering.

EXPERIENCE

Teacher Assistant— Computer Science

- Supported lab sessions and assisted students with coding exercises and debugging during practical classes.
- Prepared short instructional materials and example solutions to clarify assignment requirements.
- Graded assignments and provided constructive feedback to improve student understanding and code quality; handled XX+ submissions per semester.
- Coordinated with the course instructor to organise lab schedules and resolve technical issues in the lab environment.

Academic project experience

- Contributed to small feature development and debugging tasks within a project setting to learn software development lifecycle practices.
- Wrote and tested modular code, used version control for collaboration and documented small components for future reference.
- Implemented fixes for reported issues and validated changes through basic unit tests and manual testing; resolved X issues relevant to project stability.

IT / Lab Assistant — Computer Lab

University Computer Lab (provide exact name)

- Assisted with lab setup and basic maintenance tasks to ensure smooth operation of practical sessions.
- Helped students with software installation, environment configuration and troubleshooting common issues.
- Documented recurring issues and suggested small process improvements to reduce setup time.

SKILLS & INTERESTS

Programming Languages C++, Python, JavaScript(basic)

Web & Frontend HTML, CSS, Basic frontend

frameworks Databases & Backend Basic backend

concepts, SQL **Tools & Platforms** Visual Studio

Code, Debugging

Computer Science Concepts Operating Systems fundamentals, Object-Oriented Programming, Networking basics

EDUCATION

Bachelor of Science (Information technology) in BsIT — 6th semester

- Relevant coursework: Object-Oriented Programming, Operating Systems, Database Systems, Computer Networks
- Current semester: 6th
